

Technologies and Languages

- **Languages & Frameworks:** Python, JavaScript, Django, FastAPI, Flask, LangChain, LangGraph, LangSmith, Pydantic
- **Backend & Architecture:** Generative AI, Distributed Systems, System Design, REST APIs, Microservices, AsyncIO, LLM Applications, AI Agents, RAG Systems, Prompt engineering, Structured Outputs
- **Databases & Messaging:** PostgreSQL, MongoDB, DynamoDB, Redis, Amazon SQS
- **Cloud & Infrastructure:** AWS (Lambda, S3), Docker, Kubernetes
- **Async & Monitoring:** Celery, Dramatiq, Grafana, CloudWatch
- **Tools & DevOps:** Git, GitHub, Postman, JIRA, Redmine, Metabase, VS Code, CI/CD

Work Experience

Senior Development Engineer (SDE II)	Nitro Commerce Gurugram, India	April 2025 - Present
• Built and maintained AI-powered customer support systems for Shopify stores using LLMs, custom tools, and backend guardrails to provide accurate store-specific responses and reduce hallucinations. • Developed a Magento SSO platform with phone-based OTP login, centralized authentication, token-based APIs, and automatic customer provisioning across NitroCommerce-powered stores. • Built SLA management workflows with async processing and real-time Slack alerts for SLA acceptance, breach risk, and operational monitoring. • Implemented service health monitoring and automated incident alerting systems to improve reliability and reduce downtime for AI services. • Worked across the complete system lifecycle, including backend development, API integrations, deployment, monitoring, and production support.		
Software Engineer	Thoughts2Binary Gurugram, India	Nov 2021 - Jan 2025
• Built and maintained backend systems for a commerce integration platform (Quivers), enabling data synchronization between brands, retailers, Shopify, WooCommerce, BigCommerce, and internal systems(ERP). • Developed integration workflows for orders, shipments, refunds, and cancellations to maintain reliable data consistency across multiple platforms. • Built a production-grade Shopify app from scratch, handling backend APIs, authentication, third-party integrations, and deployment. • Developed ERP integrations for systems like Scheels, Sage, and Lightspeed to synchronize inventory, orders, and fulfillment data across external platforms. • Designed asynchronous backend services using AWS and message queues to handle retries, failures, and high-volume integration workflows. • Collaborated with product, frontend, and infrastructure teams to build scalable and production-ready backend solutions.		

Education and Certifications

- **B.Tech in Computer Science Engineering**, DCRUST Haryana, India. **August 2017 - July 2021**
